

## **OneMedNet Privacy, Security & Ethical Policy**

OneMedNet is committed to strictly adhering to the highest level of professional and ethical standards and applicable regulations throughout all of our interactions and activities. First and foremost, the protection of patient privacy, and the safeguarding of data, supersedes all other objectives as we work together with our valued partners to make impactful and expeditious improvements in clinical research. Neither OneMedNet's commitment to patient privacy nor our ethical integrity will be compromised for any reason.

### **Patients**

OneMedNet places no higher objective above that of safeguarding the data privacy of patients. We utilize a multi-step de-identification process involving both AI/ML and expert clinical review. Our quality control process is extremely rigorous and thorough. OneMedNet maintains complete transparency regarding the handling and use of data, and we focus only on those data paths that promote patient care advancement and well-being.

### **Healthcare Provider Partners**

OneMedNet has been managing, moving, and securing clinical information and images for well over a decade. During this time, we have developed a wide health system network of providers that is rooted in the highest level of integrity. This network continues to expand without compromise. All data is de-identified, indexed, curated, and stored local to provider site. Only OneMedNet, and that specific provider partner, have access and visibility to the data. This ensures maximal control and confidence.

### **Life Science Organization Partners**

OneMedNet forms partnerships with Life Science organizations who share and adhere to our values involving data privacy, security, and ethics. Life Science partners must also maintain a business and operational model that is driven by patient care improvement through research and product solution innovation.
